Graphs in this chapter are simple. Terms here are used in the sense of Harary. The SML was focused as assignment of label to the vertices $\mathrm{x} \in \mathrm{V}$ with distinct elements $\mathrm{f}(\mathrm{x})$ froml, 2, .., $p$ in such a way that when the edge $e=u v$ is labeled with $\frac{\mathrm{f}(\alpha)+\mathrm{f}(\beta)}{2} \mathrm{iff}(\alpha)+\mathrm{f}(\beta)$ is even and $\frac{f(\alpha)+f(\beta)+1}{2}$ if $f(\alpha)+f(\beta)$ is odd then the resulting edges get distinct labels from the set $\{2,3, \ldots, p\}$. In [2], we proved that if $\mathrm{n}_{1} \leq \mathrm{n}_{2}<\mathrm{n}_{3}$, the three starK $1_{1, n_{1}} \cup K_{1, n_{2}} \cup K_{1, n_{3}}$ is a SMGif $\left|\mathrm{n}_{2}-\mathrm{n}_{3}\right|=4+$ $\mathrm{n}_{1}$ for $\mathrm{n}_{1}, \mathrm{n}_{2}, \mathrm{n}_{3}$ are positive integers; also, $\mathrm{n}_{1} \leq \mathrm{n}_{2}<\mathrm{n}_{3}$, the three $\operatorname{star} K_{n_{1}} \cup$ $K_{n_{2}} \cup K_{n_{3}}$ is not aSMG if $\left|\mathrm{n}_{2}-\mathrm{n}_{3}\right|>4+\mathrm{n}_{1}$ for $\mathrm{n}_{1}, \mathrm{n}_{2}, \mathrm{n}_{3}$ are positive integers.; the graph $K_{1, n_{1}} \cup K_{1, n_{1}} \cup K_{1, n_{2}} \cup K_{1, n_{3}}$ is a SMG if $\left|\mathrm{n}_{2}-\mathrm{n}_{3}\right|=$ $4+\mathrm{n}_{1}$ for $\mathrm{n}_{1}=2,3,4, \ldots ; \mathrm{n}_{2}=2,3,4, \ldots ; \mathrm{n}_{3}=2 \mathrm{n}_{1}+\mathrm{n}_{2}+4$ and $\mathrm{n}_{1} \leq \mathrm{n}_{2}<\mathrm{n}_{3}$; the $\operatorname{graph} K_{1, n_{1}} \cup K_{1, n_{1}} \cup K_{1, n_{2}} \cup K_{1, n_{3}}$ is not a SMG if $\mid \mathrm{n}_{2}-$ $\mathrm{n}_{3} \mid>4+\mathrm{n}_{1}$ for $\mathrm{n}_{1}=2,3,4, \ldots ; \mathrm{n}_{2}=2,3,4, \ldots ; \mathrm{n}_{3}=2 \mathrm{n}_{1}+\mathrm{n}_{2}+5$ and $\mathrm{n}_{1} \leq \mathrm{n}_{2}<\mathrm{n}_{3}$; the four star $K_{1,1} \cup K_{1,1} \cup K_{1, n_{2}} \cup K_{1, n_{3}}$ is a SMG if $\left|\mathrm{n}_{2}-\mathrm{n}_{3}\right|$ $=7$ forn $_{2}=1,2,3, \ldots ; n_{3}=n_{2}+7$ and $1 \leq n_{2}<n_{3}$ and the four star $K_{1,1} \cup K_{1,1} \cup K_{1, n_{2}} \cup K_{1, n_{3}}$ is not a SMG if $\left|\mathrm{n}_{2}-\mathrm{n}_{3}\right|>7$ forn $_{2}=1,2,3$, . .; $\mathrm{n}_{3} \geq \mathrm{n}_{2}+8$ and $1 \leq \mathrm{n}_{2}<\mathrm{n}_{3}$. In [3], the condition for a graph to be skole m mean is that $\mathrm{p} \geq \mathrm{q}+1$.

## Definition: Graph

A graph $G=(V(G), E(G))$, consists of two finite sets, $V(G)$, the vertex set of the graph, often denoted by just V , which is non-empty sets of elementscalled vertices, $\mathrm{E}(\mathrm{G})$, the edges set of the graph, often denoted by just E , which is possibly an empty set of element called edges.

A graph $G$ with five vertices and seven edges.

$$
\begin{aligned}
& \mathrm{V}(\mathrm{G})=\left\{\mathrm{V}_{1}, \mathrm{~V}_{2}, \mathrm{~V}_{3}, \mathrm{~V}_{4}, \mathrm{~V}_{5},\right\} \\
& \mathrm{E}(\mathrm{G})=\left\{\mathrm{e}_{1}, \mathrm{e}_{2}, \mathrm{e}_{3}, \mathrm{e}_{4}, \mathrm{e}_{5}, \mathrm{e}_{6}, \mathrm{e}_{7,}\right\}
\end{aligned}
$$

## Definition: Empty Graph

An empty graph is graph with no edges.

In the graph empty graph with two vertices.

## Definition

A graph $G=(V, E)$ with $p$ vertices and $q$ edges is said to be a SMG if there exists a function $f$ from the vertex set of $G$ to $\{1,2, \ldots, p\}$ such that the induced map $f^{*}$ from the edge set of $G$ to $\{2,3, \ldots$, p \} defined by $\mathrm{f}^{*}(\mathrm{e}=\alpha \beta)=\left\{\begin{array}{l}\frac{f(\alpha)+f(\beta)}{2} \text { if } \mathrm{f}(\alpha)+\mathrm{f}(\beta) \text { is even } \\ \frac{f(\alpha)+f(\beta)+1}{2} \text { if } \mathrm{f}(\alpha)+\mathrm{f}(\beta) \text { is odd, }\end{array}\right.$ the resulting edges get distinct labels from the set $\{2$, $3, \ldots, p\}$.

## Some Results on Skolem Me an Graphs

In this chapter, we prove that the three stars $\mathrm{K} 1, \ell \cup \mathrm{~K} 1, \mathrm{p} \cup \mathrm{K} 1, \mathrm{q}$ is a skolem mean graph if and on $\ell$ y if $|\mathrm{p}-\mathrm{q}| \leq 4+\ell$ where $\ell=1,2,3, \ldots$. And the four stars $\mathrm{K} 1, \ell \cup \mathrm{~K} 1, \ell \cup \mathrm{~K} 1, \mathrm{p} \cup \mathrm{K} 1, \mathrm{q}$ is a skolem mean graph if and on $\ell$ y if $|p-q| \leq 4+2 \ell$ where $\ell=$ $2,3,4 \ldots$. Also, we prove that the five stars $\mathrm{K} 1, \ell \cup$ $\mathrm{k} 1, \ell \cup \mathrm{k} 1, \ell \cup \mathrm{k} 1, \mathrm{p} \cup \mathrm{k} 1, \mathrm{q}$ is a skolem mean graph if and on $\ell$ y if $|\mathrm{p}-\mathrm{q}| \leq 4+3 \ell$ where $\ell=2,3,4, \ldots$. Finally we give the conjecture that the $t$ stars $t(k 1, \ell)$ $\cup \mathrm{k} 1, \mathrm{p} \cup \mathrm{k} 1, \mathrm{q}$ is a skolem mean graph if and only if $\mathrm{p}-\mathrm{q} \mid \leq 4+\mathrm{t} \ell$ where $\mathrm{t}=1,2,3,4 \ldots$.

## Theorem

$\mathrm{K} 1, \ell \cup \mathrm{~K} 1, \mathrm{p} \cup \mathrm{K} 1, \mathrm{q}$ is a skolem mean graph if $\mid$ $\mathrm{p}-\mathrm{q} \mid \leq 4+\ell$ where $\ell=1,2,3, \ldots$.

PROOF : Consider the graph $\mathrm{K} 1, \ell \cup \mathrm{~K} 1, \mathrm{p} \cup$ $\mathrm{K} 1, \mathrm{q}=\mathrm{K} 1, \ell \cup \mathrm{~K} 1,(\ell, \ell+1, \ell+2, \ell+3, \ldots.) \cup \mathrm{K} 1$, $(2 \ell+4,2 \ell+5,2 \ell+6, \ldots)$ where $\mathrm{p}=\ell, \ell+1, \ell+2, \ell$ $+3, \ldots, q=2 \ell+4,2 \ell+5,2 \ell+6, \ldots$ and $\ell=1,2,3, \ldots$ $. K 1, \ell \cup K 1, p \cup K 1, q=K 1, \ell \cup K 1, \ell+t-1 \cup K 1,2 \ell$ $+t+3$ where $\ell=1,2,3, \ldots$ and $t=1,2,3, \ldots$.

## Case 1: Let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}$.

Consider the graph $\mathrm{K} 1, \ell \cup \mathrm{~K} 1, \mathrm{p} \cup \mathrm{K} 1, \mathrm{q}=\mathrm{K} 1, \mathrm{~m}$ $\cup \mathrm{K} 1,2 \mathrm{~m}-1 \cup \mathrm{~K} 1,3 \mathrm{~m}+3$. let $\{\mathrm{u}\}$,
$\{$ ui: $1 \leq \mathrm{i} \leq \mathrm{m}\},\{\mathrm{v}\},\{\mathrm{vj}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}-1\}$ and $\{$ $\mathrm{w}\},\{\mathrm{wk}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+3\}$ be the vertices of $\mathrm{K} 1, \mathrm{~m}$, $\mathrm{K} 1,2 \mathrm{~m}-1$ and $\mathrm{K} 1,3 \mathrm{~m}+3$ respectively. Then $\mathrm{K} 1, \mathrm{~m}$ $\cup \mathrm{K} 1,2 \mathrm{~m}-1 \cup \mathrm{~K} 1,3 \mathrm{~m}+3$ has $6 \mathrm{~m}+5$ vertices and $6 m+2$ edges.

Define f: V $(\mathrm{K} 1, \mathrm{~m} \cup \mathrm{~K} 1,2 \mathrm{~m}-1 \cup \mathrm{~K} 1,3 \mathrm{~m}+3) \rightarrow$ $\{1,2,3, \ldots, 6 m+5\}$ by $f(w)=6 m+4, f(w k)=2 k$, $1 \leq \mathrm{k} \leq 3 \mathrm{~m}+1$ and $\mathrm{f}(\mathrm{w} 3 \mathrm{~m}+2)=6 \mathrm{~m}+3$, $\mathrm{f}(\mathrm{w} 3 \mathrm{~m}+3$ $)=6 \mathrm{~m}+5 \mathrm{f}(\mathrm{f})=3, \mathrm{f}(\mathrm{vj})=2 \mathrm{~m}+2 \mathrm{j}+3,1 \leq \mathrm{j} \leq$ $2 \mathrm{~m}-1$ and $\mathrm{f}(\mathrm{u})=1, \mathrm{f}(\mathrm{ui})=\mathrm{m}+2 \mathrm{i}-1,1 \leq \mathrm{i} \leq \mathrm{m}$. The edge label of $w w k$ is $3 \mathrm{~m}+\mathrm{k}+2,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+$ $1,6 m+4$ and $6 m+5$. The edge label of $v v j$ is $m+j$ $+3,1 \leq j \leq 2 m-1$ and the edge label of uui is $\frac{m+2 i}{2}$, $1 \leq \mathrm{i} \leq \mathrm{m}$.

Hence the induced edge labels are $6 \mathrm{~m}+2$ distinct edges.

The Skolem mean labeling of $\mathrm{K} 1, \mathrm{~m} \cup \mathrm{~K} 1$, $2 \mathrm{~m}-1 \cup \mathrm{~K} 1,3 \mathrm{~m}+3$ are illustrated in Fig.2.0, Fig.2.1 and Fig. 2.2 respectively.

Consider the graph $\mathrm{G}=\mathrm{K} 1,4 \cup \mathrm{~K} 1,7 \cup \mathrm{~K} 1,15$ where $m=4$.

Then $|\mathrm{v}|=\mathrm{p}=29$ and $|\mathrm{E}|=\mathrm{q}=26$.

$K_{1,15}$

$\mathbf{K}_{1,7}$

$K_{1,4}$
Therefore, all the edge labels are distinct in the graph.

Therefore, the graph $G=K_{1,4} \cup K_{1,7} \cup K_{1,15}$ is a skolem mean graph.

Hence the graph $\mathrm{K}_{1, \mathrm{~m}} \cup \mathrm{~K}_{1,2 \mathrm{~m}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+3}$ is a skolem mean graph.

Case 2: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}+\mathbf{1}$.
Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+1} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+6}$. let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+1\right\},\{\mathrm{v}\},\{$ $\left.\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+1\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+6\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}+1}, \mathrm{~K}_{1,2 \mathrm{~m}+1}$ and $\mathrm{K}_{1,3 \mathrm{~m}+6}$ respectively.Then $\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+6}$ has 6 m +11 vertices and $6 \mathrm{~m}+8$ edges.

Definef: $\mathrm{V}\left(\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+6}\right) \rightarrow\{1,2$, $3, \ldots, 6 \mathrm{~m}+11\}$ by $\mathrm{f}(\mathrm{w})=6 \mathrm{~m}+10, \mathrm{f}\left(\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}, 1 \leq$ $\mathrm{k} \leq 3 \mathrm{~m}+4$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+5}\right)=6 \mathrm{~m}+9, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+6}\right)=$ $6 \mathrm{~m}+11 . \mathrm{f}(\mathrm{v})=3, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=2 \mathrm{~m}+2 \mathrm{j}+5,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+1$ and $f(u)=1, f\left(u_{i}\right)=m+2 i-1,1 \leq i \leq m+1$. The edge label of $\mathrm{ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+\mathrm{k}+5,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+4,6 \mathrm{~m}+$ 10 and $6 \mathrm{~m}+11$. The edge label of $\mathrm{vv}_{\mathrm{j}}$ is $\mathrm{m}+\mathrm{j}+4,1 \leq$
$\mathrm{j} \leq 2 \mathrm{~m}+1$ and the edge label of $\mathrm{uu}_{\mathrm{i}}$ is $\frac{\mathrm{m}+2 \mathrm{i}}{2}, 1 \leq \mathrm{i} \leq$ $\mathrm{m}+1$.

Hence the induced edge labels are $6 \mathrm{~m}+8$ distinct edges.

The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup$ $\mathrm{K}_{1,3 \mathrm{~m}+6}$ are illustrated in Fig.2.3, Fig.2.4 and Fig.2.5 respectively.

Consider the graph $G=K_{1,5} \cup K_{1,9} \cup K_{1,18}$ where $\mathrm{m}=4$.

Then $|\mathrm{V}|=\mathrm{p}=35$ and $|\mathrm{E}|=\mathrm{q}=32$.

$K_{1,18}$

$\mathbf{K}_{1,9}$

$K_{1,5}$

Therefore, all the edge labels are distinct in the graph.

Therefore, the graph $G=K_{1,5} \cup \mathrm{~K}_{1,9} \cup \mathrm{~K}_{1,18}$ is a skolem mean graph.

Hence the graph $\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+6}$ is a skolem mean graph.

## Case 3: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}+\mathbf{2}$.

Consider the graph $\mathrm{K}_{1, \mathrm{l}} \cup \mathrm{K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+2} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+9}$.let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+2\right\},\{\mathrm{v}\}$, $\left\{\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+3\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+9\right.$ \} be the vertices of $\mathrm{K}_{1, \mathrm{~m}+2}, \mathrm{~K}_{1,2 \mathrm{~m}+3}$ and $\mathrm{K}_{1,3 \mathrm{~m}+9}$ respectively. Then $\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+9}$ has $6 \mathrm{~m}+17$ vert ices and $6 \mathrm{~m}+14$ edges.

Define f: V $\left(\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+9}\right) \rightarrow\{1$, $2,3, \ldots, 6 \mathrm{~m}+17\}$ byf $(\mathrm{w})=6 \mathrm{~m}+16, \mathrm{f}\left(\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}, 1 \leq$ $\mathrm{k} \leq 3 \mathrm{~m}+7$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+8}\right)=6 \mathrm{~m}+15, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+9}\right)=6 \mathrm{~m}$ +17 . $\mathrm{f}(\mathrm{v})=3$, $\mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=2 \mathrm{~m}+2 \mathrm{j}+7,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+3$ and $\mathrm{f}(\mathrm{u})=1, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+2 \mathrm{i}-1,1 \leq \mathrm{i} \leq \mathrm{m}+2$. The edge label of $\mathrm{ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+\mathrm{k}+8,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+7,6 \mathrm{~m}$ +16 and $6 m+17$. The edge label of ${v v_{j}}$ is $m+j+5$, $1 \leq \mathrm{j} \leq 2 \mathrm{~m}+3$ and the edge label of $\mathrm{un}_{\mathrm{i}}$ is $\frac{\mathrm{m}+2 \mathrm{i}}{2}, 1$ $\leq \mathrm{i} \leq \mathrm{m}+2$.

Hence the induced edge labels are $6 m+14$ distinct edges.

The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup$ $\mathrm{K}_{1,3 \mathrm{~m}+9}$ are illustrated in Fig.3.6, Fig.3.7 and Fig.3.8 respectively.

Consider the graph $\mathrm{G}=\mathrm{K}_{1,6} \cup \mathrm{~K}_{1,11} \cup \mathrm{~K}_{1,21}$ where $\mathrm{m}=4$.

Then $|\mathrm{v}|=\mathrm{p}=41$ and $|\mathrm{E}|=\mathrm{q}=38$.

$\mathrm{K}_{1,21}$

K1,11

K1,6

Therefore, all the edge labels are distinct in the graph.Therefore, the graph $\mathrm{G}=\mathrm{K}_{1,6} \cup \mathrm{~K}_{1,11} \cup \mathrm{~K}_{1,21}$ is a skolem mean graph.Hence the graph $\mathrm{K}_{1, \mathrm{~m}+2} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+9}$ is a skolem mean graph.

Case 4: let $\ell=\mathbf{t}=\mathbf{m}+3$.
Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+3} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+12}$. let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+3\right\},\{\mathrm{v}\}$, $\left\{\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+5\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+12\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}+3}, \mathrm{~K}_{1,2 \mathrm{~m}+5}$ and $\mathrm{K}_{1,3 \mathrm{~m}+12}$ respectively.Then $\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+12}$ has $6 m+23$ vertices and $6 m+20$ edges.

Define f: V $\left(\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+12}\right) \rightarrow\{1$, $2,3, \ldots, 6 m+23\} \operatorname{byf}(w)=6 m+22, f\left(w_{k}\right)=2 k$, $1 \leq \mathrm{k} \leq 3 \mathrm{~m}+10$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+11}\right)=6 \mathrm{~m}+21, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+12}\right.$ $)=6 m+23 . f(v)=3, f\left(v_{j}\right)=2 m+2 j+9,1 \leq j \leq$ $2 \mathrm{~m}+5$ and $\mathrm{f}(\mathrm{u})=1, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+2 \mathrm{i}-1,1 \leq \mathrm{i} \leq \mathrm{m}$ +3 . The edge label of $\mathrm{ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+\mathrm{k}+11,1 \leq \mathrm{k} \leq$ $3 m+10,6 m+22$ and $6 m+23$. The edge label of $v v_{j}$
is $m+j+6,1 \leq j \leq 2 m+5$ and the edge label of ${u u_{i}}_{i}$ is $\frac{\mathrm{m}+2 \mathrm{i}}{2}, 1 \leq \mathrm{i} \leq \mathrm{m}+3$.

Hence the induced edge labels are $6 m+20$ distinct edges.

The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup$ $\mathrm{K}_{1,3 \mathrm{~m}+12}$ are illustrated in Fig.3.9, Fig.3.10 and Fig.3.11 respectively.

Consider the graph $\mathrm{G}=\mathrm{K}_{1,7} \cup \mathrm{~K}_{1,13} \cup \mathrm{~K}_{1,24}$ where $\mathrm{m}=4$.

Then $|\mathrm{v}|=\mathrm{p}=47$ and $|\mathrm{E}|=\mathrm{q}=44$.

$\mathbf{K}_{1,13}$

$\mathbf{K}_{1,7}$
Therefore, all the edge labels are distinct in the graph. Therefore, the graph $G=K_{1,7} \cup K_{1,13} \cup K_{1,24}$ is
a skolem mean graph. Hence the graph $\mathrm{K}_{1, \mathrm{~m}+3} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+12}$ is a skolem mean graph.

Case 5: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}+\mathbf{r}$.
Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+3 \mathrm{r}+3}$ Where $\mathrm{r}=0,1,2,3, \ldots$ let $\{\mathrm{u}\}$, $\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+\mathrm{r}\right\},\{\mathrm{v}\},\left\{\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+2 \mathrm{r}-1\right\}$ and $\{\mathrm{w}$ $\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+3 \mathrm{r}+3\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}}$ , $\mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1}$ and $\mathrm{K}_{1,3 \mathrm{~m}+3 \mathrm{r}+3}$ respectively. Then $\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+3 \mathrm{r}+3}$ has $6 \mathrm{~m}+6 \mathrm{r}+5$ vertices and $6 m+6 r+2$ edges.

Definef: V $\left(\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}} \cup \mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+3 \mathrm{r}+3}\right) \rightarrow\{$ $1,2,3, \ldots, 6 m+6 r+5\}$ by $f(w)=6 m+6 r+4, f($ $\left.\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}, 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+3 \mathrm{r}+1$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+3 \mathrm{r}+2}\right)=6 \mathrm{~m}+$ $6 \mathrm{r}+3, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+3 \mathrm{r}+3}\right)=6 \mathrm{~m}+6 \mathrm{r}+5 \mathrm{f}(\mathrm{v})=3, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=$ $2 \mathrm{~m}+2 \mathrm{j}+2 \mathrm{r}+3,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+2 \mathrm{r}-1$ and $\mathrm{f}(\mathrm{u})=1, \mathrm{f}($ $\left.u_{i}\right)=m+2 i-1,1 \leq i \leq m+r$. The edge label of $\mathrm{ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+3 \mathrm{r}+\mathrm{k}+2,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+3 \mathrm{r}+1,6 \mathrm{~m}+6 \mathrm{r}+4$ and $6 m+6 r+5$. The edge label of $v v_{j}$ is $m+j+r+$ $3,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+2 \mathrm{r}-1$ and the edge label of $\mathrm{uu}_{\mathrm{i}}$ is $\frac{\mathrm{m}+2 \mathrm{i}}{2}, 1 \leq \mathrm{i} \leq \mathrm{m}+\mathrm{r}$. Hence the induced edge labels are $6 \mathrm{~m}+6 \mathrm{r}+2$ distinct edges. Conversely, suppose that $K_{1, \ell} \cup K_{1 p} \cup K_{1, q}$ is a skolem mean graph if $\mid p-q$ $\mid>4+\ell$ Where $\ell=1,2,3, \ldots$.

Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1}$, $(\ell, \ell+1, \ell+2, \ell+3, \ldots.) \cup \mathrm{K}_{1,(2 \ell+5,2 \ell+6,2 \ell+7, \ldots)}$ where $\mathrm{p}=\ell$, $\ell$ $+1, \ell+2, \ell+3, \ldots, q=2 \ell+5,2 \ell+6,2 \ell+7, \ldots$ and $\ell=$ $1,2,3, \ldots . K_{1, \ell} \cup K_{1, p} \cup K_{1, q}=K_{1, \ell} \cup K_{1, \ell+\mathrm{t}-1} \cup \mathrm{~K}_{1,2 \ell+}$ $\mathrm{t}+4$ where $\ell=1,2,3, \ldots$ and $\mathrm{t}=1,2,3 \ldots$.

## Case 6: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}$.

Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+4}$. let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}\right\},\{\mathrm{v}\}$, $\{$ $\left.\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}-1\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+4\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}}, \mathrm{~K}_{1,2 \mathrm{~m}-1}$ and $\mathrm{K}_{1,3 \mathrm{~m}+4}$ respectively. Then $\mathrm{K}_{1, \mathrm{~m}} \cup \mathrm{~K}_{1,2 \mathrm{~m}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+4}$ has $6 \mathrm{~m}+$ 6 vertices and $6 m+3$ edges.

Define f: V $\left(\mathrm{K}_{1, \mathrm{~m}} \cup \mathrm{~K}_{1,2 \mathrm{~m}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+4}\right) \rightarrow\{1,2$, $3, \ldots, 6 \mathrm{~m}+6\}$ by $\mathrm{f}(\mathrm{w})=6 \mathrm{~m}+5, \mathrm{f}\left(\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}-1,1 \leq$ $\mathrm{k} \leq 3 \mathrm{~m}+2$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+3}\right)=6 \mathrm{~m}+4, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+4}\right)=6 \mathrm{~m}+$ 6. $\mathrm{f}(\mathrm{v})=4, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=2 \mathrm{~m}+2 \mathrm{j}+4,1 \leq \mathrm{j} \leq 2 \mathrm{~m}-1$ and $\mathrm{f}(\mathrm{u})=2, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+2 \mathrm{i}, 1 \leq \mathrm{i} \leq \mathrm{m}$. The edge label of $\mathrm{Ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+\mathrm{k}+2,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+2,6 \mathrm{~m}+5$ and 6 m
+6 . The edge label of $\mathrm{vv}_{\mathrm{j}}$ is $\mathrm{m}+\mathrm{j}+4,1 \leq \mathrm{j} \leq 2 \mathrm{~m}-1$ and the edge label of $u u_{i}$ is $\frac{m+2 i+2}{2}, 1 \leq i \leq m$.

Hence the induced edge labels $6 \mathrm{~m}+3$ are not receiving distinct edges.The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}} \cup \mathrm{~K}_{1,2 \mathrm{~m}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+4}$ are illustrated in Fig.2.12, Fig.2.13 and Fig.2.14 respectively.

Consider the graph $\mathrm{G}=\mathrm{K}_{1,4} \cup \mathrm{~K}_{1,7} \cup \mathrm{~K}_{1,16}$ where $\mathrm{m}=4$.

Then $|\mathrm{V}|=\mathrm{p}=30$ and $|\mathrm{E}|=\mathrm{q}=27$.

Therefore, the edge label of ( 29,1 ) is 15 in $\mathrm{K}_{1,16}$ and the edge label of $(4,26)$ is 15 in $\mathrm{K}_{1,7}$.

Therefore, the two edge labels are same in the graph.

Therefore, the edge labels are not distinct in the graph.

Therefore, the graph $G=K_{1,4} \cup K_{1,7} \cup \mathrm{~K}_{1,16}$ is not a skolem mean graph.

Hence the graph $K_{1, \mathrm{~m}} \cup \mathrm{~K}_{1,2 \mathrm{~m}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+4}$ is not a skolem mean graph.

## Case 7: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m + 1}$.

Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{f}}=\mathrm{K}_{1, \mathrm{~m}+\mathrm{l}} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+7}$. let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+1\right\},\{\mathrm{v}\}$, $\left\{\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+1\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+7\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}+1}, \mathrm{~K}_{1,2 \mathrm{~m}+1}$ and $\mathrm{K}_{1,3 \mathrm{~m}+7}$ respectively.Then $\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+7}$ has $6 \mathrm{~m}+$ 12 vertices and $6 \mathrm{~m}+9$ edges.

Definef: $V\left(\mathrm{~K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+7}\right) \rightarrow\{1$, $2,3, \ldots, 6 m+12\}$ byf $(w)=6 m+11, f\left(w_{k}\right)=2 k$ $-1,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+5$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+6}\right)=6 \mathrm{~m}+10, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+7}\right.$ ) $=6 \mathrm{~m}+12 . \mathrm{f}(\mathrm{v})=4, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=2 \mathrm{~m}+2 \mathrm{j}+6,1 \leq \mathrm{j} \leq$ $2 \mathrm{~m}+1 \operatorname{andf}(\mathrm{u})=2, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+2 \mathrm{i}, 1 \leq \mathrm{i} \leq \mathrm{m}+1$. The edge label of $\mathrm{ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+\mathrm{k}+5,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+5$, $6 \mathrm{~m}+11$ and $6 \mathrm{~m}+12$. The edge label of $\mathrm{vv}_{\mathrm{j}}$ is $\mathrm{m}+\mathrm{j}+$ $5,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+1$ and the edge label of $\mathrm{uu}_{\mathrm{i}}$ is $\frac{\mathrm{m}+2 \mathrm{i}+2}{2}, 1 \leq \mathrm{i} \leq \mathrm{m}+1$.

Hence the induced edge labels $6 \mathrm{~m}+9$ are not receiving distinct edges.

The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup$ $\mathrm{K}_{1,3 \mathrm{~m}+7}$ are illustrated in Fig.2.15, Fig.2.16 and Fig.2.17 respectively.

Consider the graph $G=K_{1,5} \cup K_{1,9} \cup K_{1,19}$ where $\mathrm{m}=4$.

Then $|\mathrm{V}|=\mathrm{p}=36$ and $|\mathrm{E}|=\mathrm{q}=33$.

K1,9

$K_{1,5}$

Therefore, the edge label of $(35,1)$ is 18 in $\mathrm{K}_{1,19}$ and the edge label of $(4,32)$ is 18 in $\mathrm{K}_{1,9}$.

Therefore, the two edge labels are same in the graph.

Therefore, the edge labels are not distinct in the graph.

Therefore, the graph $G=\mathrm{K}_{1,5} \cup \mathrm{~K}_{1,9} \cup \mathrm{~K}_{1,19}$ is not a skolem mean graph.

Hence the graph $\mathrm{K}_{1, \mathrm{~m}+1} \cup \mathrm{~K}_{1,2 \mathrm{~m}+1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+7}$ is not a skolem mean graph.

Case 8: let $\ell=\mathbf{t}=\mathbf{m}+2$.
Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+2} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+10}$. let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+2\right\},\{\mathrm{v}\},\{$ $\left.\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+3\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+10\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}+2}, \mathrm{~K}_{1,2 \mathrm{~m}+3}$ and $\mathrm{K}_{1,3 \mathrm{~m}+10}$ respectively. Then $\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+10}$ has 6 m +18 vertices and $6 m+15$ edges.

Definef: V $\left(\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+10}\right) \rightarrow\{1$, $2,3, \ldots, 6 \mathrm{~m}+18\} \operatorname{byf}(\mathrm{w})=6 \mathrm{~m}+17, \mathrm{f}\left(\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}$ $-1,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+8$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+9}\right)=6 \mathrm{~m}+16, \mathrm{f}($ $\left.\mathrm{w}_{3 \mathrm{~m}+10}\right)=6 \mathrm{~m}+18 . \mathrm{f}(\mathrm{v})=4, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=2 \mathrm{~m}+2 \mathrm{j}+8,1$ $\leq \mathrm{j} \leq 2 \mathrm{~m}+3$ and $\mathrm{f}(\mathrm{u})=2, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+2 \mathrm{i}, 1 \leq \mathrm{i} \leq \mathrm{m}$
+2 . The edge label of $w w_{k}$ is $3 m+k+8,1 \leq k \leq 3 m$ $+8,6 m+17$ and $6 m+18$. The edge label of $\mathrm{vv}_{\mathrm{j}}$ is m $+j+6,1 \leq j \leq 2 m+3$ and the edge label of ${u u_{i}}_{i}$ is $\frac{m+2 i+2}{2}, 1 \leq i \leq m+2$.

Hence the induced edge labels $6 \mathrm{~m}+15$ are not receiving distinct edges.

The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup$ $\mathrm{K}_{1,3 \mathrm{~m}+10}$ are illustrated in Fig.2.18, Fig. 2.19 and Fig. 2.20 respectively.

Consider the graph $G=K_{1,6} \cup \mathrm{~K}_{1,11} \cup \mathrm{~K}_{1,22}$ where $m=4$.

Then $|\mathrm{v}|=\mathrm{p}=42$ and $|\mathrm{E}|=\mathrm{q}=39$.

$\mathbf{K}_{1,22}$

K1,11

$\mathbf{K}_{1,6}$

Therefore, the edge label of ( 41,1 ) is 21 in $\mathrm{K}_{1,22}$ and the edge label of $(4,38)$ is 21 in $K_{1,11}$.

Therefore, the two edge labels are same in the graph.

Therefore, the edge labels are not distinct in the graph.

Therefore, the graph $G=K_{1,6} \cup K_{1,11} \cup K_{1,22}$ is not a skolem mean graph.

Hence the graph $\mathrm{K}_{1, \mathrm{~m}+2} \cup \mathrm{~K}_{1,2 \mathrm{~m}+3} \cup \mathrm{~K}_{1,3 \mathrm{~m}+10}$ is not a skolem mean graph.

Case 9: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}+\mathbf{3}$.
Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+3} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+13}$.let $\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+3\right\},\{\mathrm{v}\}$, $\{$ $\left.\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+5\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq 3 \mathrm{~m}+13\right\}$ be the vertices of $\mathrm{K}_{1, \mathrm{~m}+3}, \mathrm{~K}_{1,2 \mathrm{~m}+5}$ and $\mathrm{K}_{1,3 \mathrm{~m}+13}$ respectively.Then $\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+13}$ has 6 m +24 vertices and $6 \mathrm{~m}+21$ edges.

Definef: $\mathrm{V}\left(\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+13}\right) \rightarrow\{1$, $2,3, \ldots, 6 \mathrm{~m}+24\}$ by $\mathrm{f}(\mathrm{w})=6 \mathrm{~m}+23, \mathrm{f}\left(\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}-$ $1,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+11$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+12}\right)=6 \mathrm{~m}+22$, $\mathrm{f}($ $\left.\mathrm{w}_{3 \mathrm{~m}+13}\right)=6 \mathrm{~m}+24$. $\mathrm{f}(\mathrm{v})=4, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)=2 \mathrm{~m}+2 \mathrm{j}+10$, $1 \leq \mathrm{j} \leq 2 \mathrm{~m}+5$ andf $(\mathrm{u})=2, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)=\mathrm{m}+2 \mathrm{i}, 1 \leq \mathrm{i} \leq$ $\mathrm{m}+3$. The edge label of $\mathrm{ww}_{\mathrm{k}}$ is $3 \mathrm{~m}+\mathrm{k}+11,1 \leq \mathrm{k} \leq$ $3 m+11,6 m+23$ and $6 m+24$. The edge label of $v v_{j}$ ism $+\mathrm{j}+7,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+5$ and the edge label of $\mathrm{uu}_{\mathrm{i}}$ is $\frac{\mathrm{m}+2 \mathrm{i}+2}{2}, 1 \leq \mathrm{i} \leq \mathrm{m}+3$.

Hence the induced edge labels $6 \mathrm{~m}+21$ are not receiving distinct edges.

The Skolem mean labeling of $\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup$ $\mathrm{K}_{1,3 \mathrm{~m}+13}$ are illustrated in Fig.2.21, Fig.2.22 and Fig. 2.23 respectively.

Consider the graph $G=K_{1,7} \cup K_{1,13} \cup K_{1,25}$ where $\mathrm{m}=4$.
Then $|\mathrm{v}|=\mathrm{p}=48$ and $|\mathrm{E}|=\mathrm{q}=45$.

K1,25

$\mathbf{K}_{\mathbf{1 , 1 3}}$

$\mathbf{K}_{1,7}$
Therefore, the edge label of ( 47,1 ) is 24 in $K_{1,25}$ and the edge label of $(4,44)$ is 24 in $\mathrm{K}_{1,13}$.

Therefore, the two edge labels are same in the graph.

Therefore, the edge labels are not distinct in the graph.

Therefore, the graph $G=K_{1,7} \cup K_{1,13} \cup K_{1,25}$ is not a skolem mean graph.

Hence the graph $\mathrm{K}_{1, \mathrm{~m}+3} \cup \mathrm{~K}_{1,2 \mathrm{~m}+5} \cup \mathrm{~K}_{1,3 \mathrm{~m}+13}$ is not a skolem mean graph.

Case 10: let $\boldsymbol{\ell}=\mathbf{t}=\mathbf{m}+\mathbf{r}$ where $\mathbf{r}=\mathbf{0}, \mathbf{1 , 2 , 3 , \ldots .}$
Consider the graph $\mathrm{K}_{1, \ell} \cup \mathrm{~K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}=\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}} \cup$ $\mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1} \cup \mathrm{~K}_{1,3 \mathrm{~m}+3 \mathrm{r}+4} . \operatorname{Let}\{\mathrm{u}\},\left\{\mathrm{u}_{\mathrm{i}}: 1 \leq \mathrm{i} \leq \mathrm{m}+\mathrm{r}\right\}$, $\{\mathrm{v}\},\left\{\mathrm{v}_{\mathrm{j}}: 1 \leq \mathrm{j} \leq 2 \mathrm{~m}+2 \mathrm{r}-1\right\}$ and $\{\mathrm{w}\},\left\{\mathrm{w}_{\mathrm{k}}: 1 \leq \mathrm{k} \leq\right.$ $3 m+3 r+4\}$ be the vertices of $K_{1, m+r}, K_{1,2 m+2 r-1}$ and $\mathrm{K}_{1,3 \mathrm{~m}+3 \mathrm{r}+4}$ respectively.Then $\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}} \cup \mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1} \cup$ $K_{1,3 m+3 r+4}$ has $6 m+6 r+6$ vertices and $6 m+6 r+3$ edges.

Definef: V $\left(\mathrm{K}_{1, \mathrm{~m}+\mathrm{r}} \cup \mathrm{K}_{1,2 \mathrm{~m}+2 \mathrm{r}-1} \cup \mathrm{~K}_{13 \mathrm{~m}+3 \mathrm{r}+4}\right) \rightarrow$ $\{1,2,3, \ldots, 6 \mathrm{~m}+6 \mathrm{r}+6\}$ by $\mathrm{f}(\mathrm{w})=6 \mathrm{~m}+6 \mathrm{r}+5$, $\mathrm{f}($ $\left.\mathrm{w}_{\mathrm{k}}\right)=2 \mathrm{k}-1,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+3 \mathrm{r}+2$ and $\mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+3 \mathrm{r}+3}\right)=6 \mathrm{~m}+$ $6 \mathrm{r}+4, \mathrm{f}\left(\mathrm{w}_{3 \mathrm{~m}+3 \mathrm{r}+4}\right)=6 \mathrm{~m}+6 \mathrm{r}+6 . \mathrm{f}(\mathrm{v})=4, \mathrm{f}\left(\mathrm{v}_{\mathrm{j}}\right)$ $=2 \mathrm{~m}+2 \mathrm{j}+2 \mathrm{r}+4,1 \leq \mathrm{j} \leq 2 \mathrm{~m}+2 \mathrm{r}-1$ and $\mathrm{f}(\mathrm{u})=2, \mathrm{f}\left(\mathrm{u}_{\mathrm{i}}\right)$ $=m+2 \mathrm{i}, 1 \leq \mathrm{i} \leq \mathrm{m}+\mathrm{r}$. The edge label of ww k is $3 \mathrm{~m}+$ $3 \mathrm{r}+\mathrm{k}+2,1 \leq \mathrm{k} \leq 3 \mathrm{~m}+3 \mathrm{r}+2,6 \mathrm{~m}+6 \mathrm{r}+5$ and 6 m
$+6 \mathrm{r}+6$. The edge label of $\mathrm{vv}_{\mathrm{j}}$ is $\mathrm{m}+\mathrm{j}+\mathrm{r}+4,1 \leq \mathrm{j} \leq$ $2 m+2 r-1$ and the edge label of ${u u_{i}}$ is $\frac{m+2 i+2}{2}, 1 \leq$ $\mathrm{i} \leq \mathrm{m}+\mathrm{r}$. Also, the edge label of $\mathrm{ww}_{1}$ is $3 \mathrm{~m}+3 \mathrm{r}+3$ and the edge label of ${v v_{2 m+2 r-1}}$ is $3 m+3 r+3$. Therefore, the edge labels are not distinct. Therefore, the induced edge labels $6 \mathrm{~m}+6 \mathrm{r}+3$ are not receiving distinct edges. Which is a contradiction. Hence $K_{1, \ell} \cup$ $\mathrm{K}_{1, \mathrm{p}} \cup \mathrm{K}_{1, \mathrm{q}}$ is not a skolem mean graph if $|\mathrm{p}-\mathrm{q}|>$ $4+\ell$.Where $\ell=1,2,3, \ldots$.Hence the theorem.

## Conclusion

The communications network addressing: A communication network is composed of nodes, each of which has computing power and can transmit and receive messages over communication links, wireless or cabled. The basic network topologies include fully connected, mesh, star, ring, tree, bus. A single network may consist of several interconnected subnets of different topologies.

Networks are further classified as Local Area Networks (LAN), e.g. inside one building, or Wide Area Networks (WAN), e.g. between buildings. It might beuseful to assign each user terminal a "node label," subject to the constraint that all connecting "edges" (communication links) receive distinct labels. In this way, the numbers of any two communicating terminals automatically specify (by simple subtraction) the link label of the connecting path; and conversely, the path label uniquely specifies the pair of user terminals which it interconnects.Researches may get some information related to graph labeling and its applications in communication field and can get some ideas related to their field of research.

For each kind of application, depending on problem scenario a kind of graph is used for representing the problem. A suitable labeling is applied on that graph in order to solve the problem. Starting from establishing fast and efficient communication.
